

Green Earth Mech instructions

step 1

glue

toothpick

X-Acto knife

parts (printed on 200 gsm paper)

p. 1/1

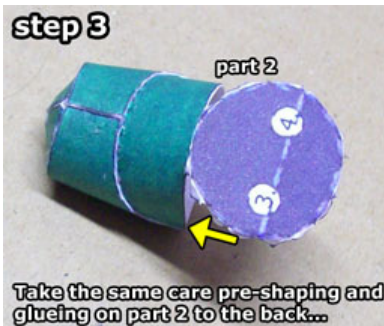

To build your own papercraft Green Earth Mech unit, you really don't need many tools: glue, a sharp knife, a cutting mat, maybe a toothpick, and of course the parts! :o)

step 2

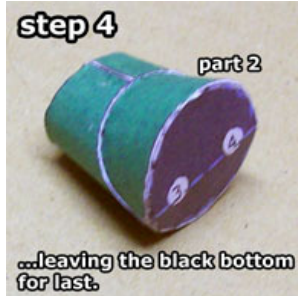

Take your time to pre-shape part 1 and glue it together as shown here.

step 3

Take the same care pre-shaping and gluing on part 2 to the back...

step 4

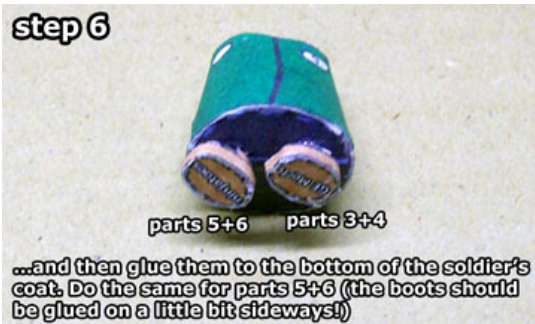

...leaving the black bottom for last.

step 5

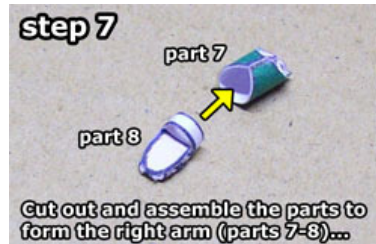

Cut out and assemble parts 3-4...

step 6

...and then glue them to the bottom of the soldier's coat. Do the same for parts 5+6 (the boots should be glued on a little bit sideways!)

step 7

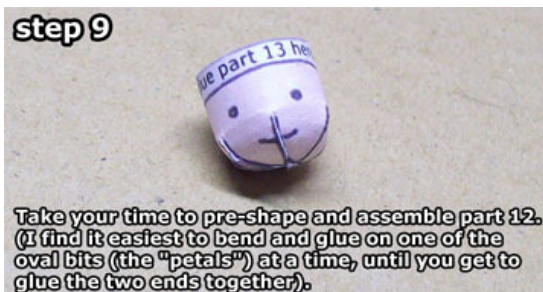

Cut out and assemble the parts to form the right arm (parts 7-8)...

step 8

...and then glue them to the torso as shown here. Do the same for the other arm (parts 9-11).

step 9

Take your time to pre-shape and assemble part 12. (I find it easiest to bend and glue on one of the oval bits (the "petals") at a time, until you get to glue the two ends together).

step 10

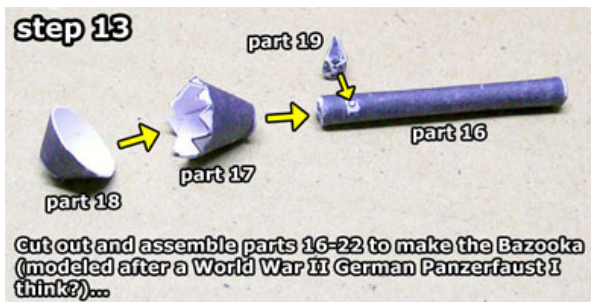

step 11
